### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/02/2008 has been entered.

### EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas C. Basso on Friday, July 11, 2008.

The application has been amended as follows:

3. Claims 16,24,26, and 28 have been amended as follows:

Delete the limitation "wherein determining the battery capacity consumption mode is independent of a temperature of the secondary battery", and insert -- determining the battery capacity consumption mode is independent of a **measured** temperature of the secondary battery --.

***Allowable Subject Matter***

4. The following is an examiner's statement of reasons for allowance:
5. Claims **16-30** are allowed.

Claims 16,24,26, and 28 recite, inter alia, a battery remaining capacity calculating method and device for calculating a remaining capacity as a capacity of electricity dischargeable by a secondary battery,  
said battery remaining capacity calculating method comprising:

means of measuring an output voltage value of said secondary battery;

means of dividing a battery capacity consumption mode of said secondary battery into a high consumption rate mode in which the output voltage value is not lower than a voltage threshold value and a low consumption rate mode in which the output voltage value is lower than the voltage threshold value;

means of calculating a remaining capacity in said low consumption rate mode on a basis of a predetermined nonlinear reference voltage curve as a discharge characteristic of said secondary battery and said output voltage value;

means of calculating a remaining capacity in said high consumption rate mode supposing that there is minimal change in the remaining capacity at a time of change from said low consumption rate mode to said high consumption rate mode,

wherein determining the battery capacity consumption mode is independent of a measured temperature of the secondary battery.

The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record to include either of the above limitations.

Claims 17-23,25,27, and 29-30 are also allowable due to their dependency on claims 16,24,26, and 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art cited in the PTO-892 and not mentioned above disclose related apparatus.
2. Lewin et al., (Lewin) US PAT 5,834,923 discloses a battery charge control method.
3. Bariand et al., (Bariand) US PAT 6,094,032 discloses a method of controlling rapid charging of an alkaline-electrolyte industrial storage cell.
4. Palanisamy et al., (Palanisamy) US PAT 5,926,008, discloses an apparatus and method for determining the capacity of a nickel-cadmium battery.
